## Abstract

The purpose of EventElyt software is to automate the existing event management manual system by the help of computerized equipment so that the valuable data or information can be stored for a longer period. Information can be easily accessed and manipulated. This software can assure you error free, secure, reliable and fast management of your events.

**Index Terms:** Budget, Checklist, EventElyt, Events, Wedding, Vendors.

## I. INTRODUCTION

The main objective of EventElyt software is to conduct your event in the most creative and unique way by reducing the time for planning and organizing the event related services.

The basic aim of this project is to know about the vendors who are located in and around your locality. Users within and outside the city can plan their events online.

*Below is the features of EventElyt system.*

- Users can create their profile and plan their events by choosing the services available. Also they can view the vendors they have booked.
- Task(checklist) or To-Do-List will be listed by the admin. Users can unselect the task that he has completed and remaining ones will be in pending list. So, this will help users to know about the task that are pending and help them to organize the event fairly.
- Users can Contact their favorite vendors easily, and save the replies to their enquiries.
- Users can create their guest list quickly and keep it updated.
- This software keeps your wedding expenses within your budget and it helps to make sure that all your wedding

expenses are updated and under control. With this, you'll be sure not to exceed your estimated budget or forget any major expenses!

- Users can create their wedshoots.
- The services provided by the vendor can be listed by them, so it will helps users to find them and contact them.

## II. LITERATURE SURVEY

*TheKnot and WeddingBrigade.*

These websites have been developed for planning events online. It helps in connecting people with great merchants and helping event merchants build their business. This website helps in maintaining vendor and user details. This makes the application user friendly and easy to use.

## III. EXISTING SYSTEM

Weddings is an important celebration for many people around the world. They celebrate the binding love between two people and the journey into a new life together. Often times, weddings are events that brides have been dreaming about and looking forward to their entire lives. Many brides would even agree that, "a wedding is the celebration of a lifetime, and whether that celebration is a grand fete for hundreds or an intimate gathering of family and friends, it is a day when dreams come true".

During these days' weddings and events such as birthday, reception require a great effort and planning. An event to become successful a great planning is required. Each and every aspect related to the event must be taken care of.

In the existing system planning the event, executing it is a time consuming one with human effort. A wedding to be conducted in a smooth way requires efforts of many hands. Searching for a venue, vendors, bride and

groom accessories everything must be taken care of.

In the existing system[3] vendors need to contact the admin in order to communicate to the users. There is no separate interface to the vendor where he can add his services and details.

We here together have come up with a website EventElyt were you can organize all your events smoothly and quickly and vendors can signup to the system to add all his information.

**IV. PROPOSED SYSTEM**

Traditional approach, arranged marriages were very common for many years. Only in recent years did the idea of marriage for love become popular. This new concept of a wedding speaks to many brides and encourages them to make their fantasy weddings come true. Wedding trends change throughout the years and are for the most part greatly influenced by many societal factors. These factors and trends influence many couples' choices when it comes to what they want in their weddings.

There are two types of users one the vendor and other the end user. A vendor is a one who will advertise his services through this website, the details of the services which he is providing. Also, the feature to upload photos. The end users who need a particular services like catering service, hall booking, birthday cake, transportation, wedding planner, wedding entertainment can search in this website based on the city where they are located in. If the user gets what he/she is looking for then he can book those services.

It becomes very easy for a person to organize his event through this website. All the things needed for a successful organization for an event is all under EventElyt. Various vendors that are spread over the country can be viewed together.

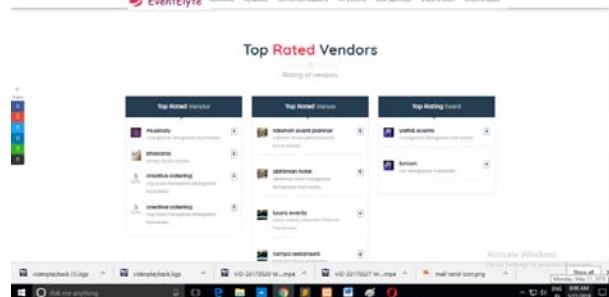

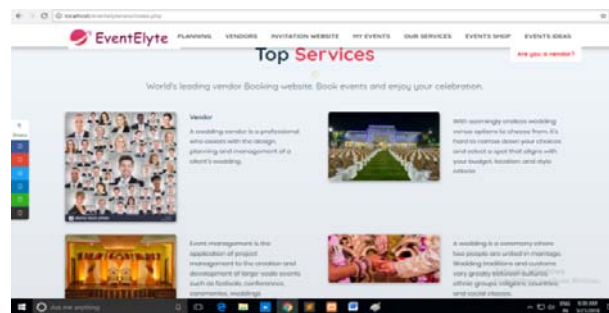

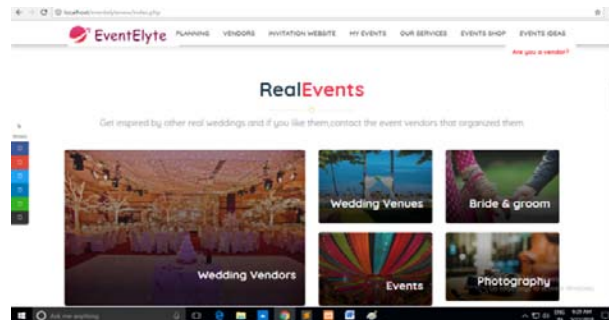

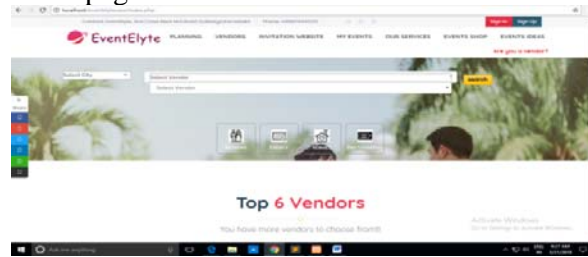

**V. IMPLEMENTATION AND RESULT**

**User Module**

**Index Page**

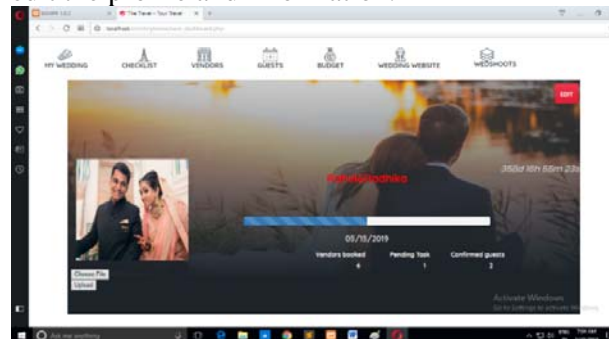

This website helps users to view details of the vendors registered in the website. Users need to register to the website in order to book services like catering, photography, wedding planner, wedding decoration etc. Users can select the vendors according to their need and book them also they can search for the vendors based to the location. Top services provided in this

website and top rated vendors are displayed in index page.

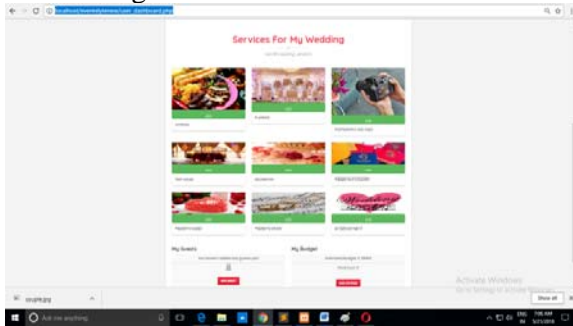

**My Wedding Module**

This module displays the user profile. Users can edit the profile and information.

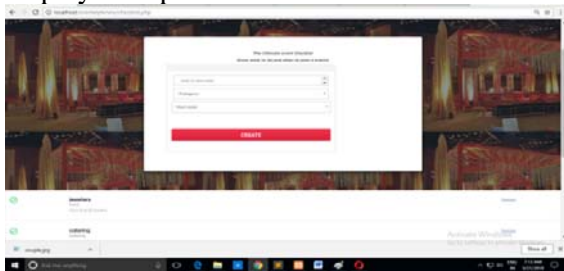

User can select different types of vendors needed. According to the category like catering,

planning, decoration etc users can select various vendors registered under them.

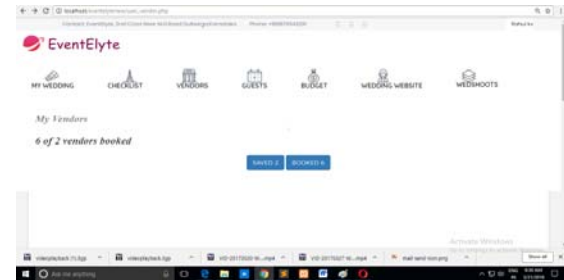

**Checklist Module**

Users can add the checklist based on category and select the start date. Users can note down what he should do and when to plan for it. All the checklist added by the user will be displayed for him. Once the task is done he can delete the task. The count of task which is pending will be displayed in profile module.

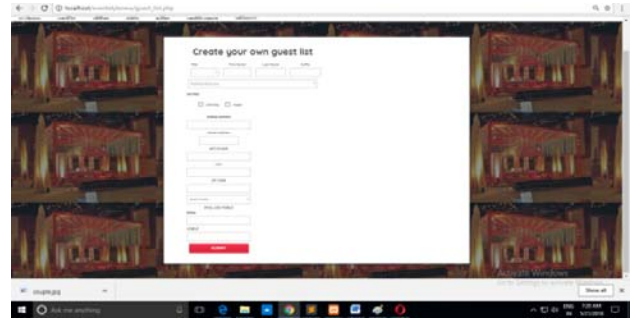

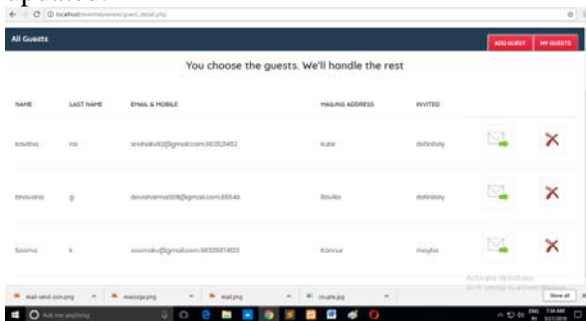

**Vendor Module**

This module will display the saved and booked vendors of the users.

**Guest Module**

Users can add details of the guest to be invited to the event and send an invitation to their email. According to the response of the guest either 'Attending' or 'Not Attending' guest list will be updated.

**Budget Planning**

This budget planner module helps our website users to have a clear cut picture about the expenditure on a particular event. He/She can adjust the amount based on his/her needs.

Fig.1 depicts how budget is managed and divided according to expense of overall wedding or events. It shows the complete set of budget division in one module. And it helps the user to manually manage the cost and total calculation and how the estimated budget have been used. According to the division the bill will be generated.

In this project, the breakdown of event expenses is done based on the highest number of vendors chosen by the users. For example, catering-20%, Decorations-15%, Planners-13% etc. We have also provided the option for editing the estimated budget which will be automatically recalculated for all the vendors which the user has selected.

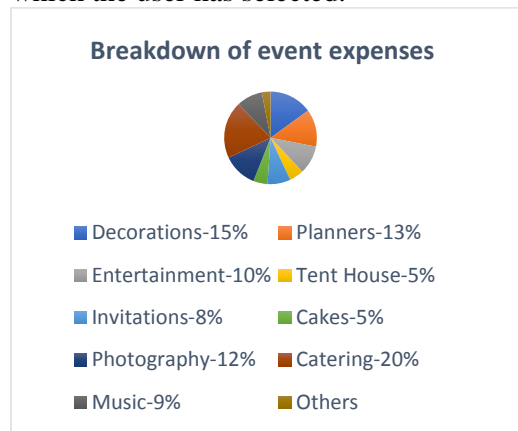

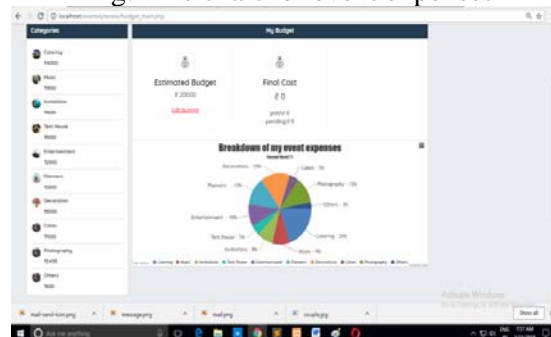

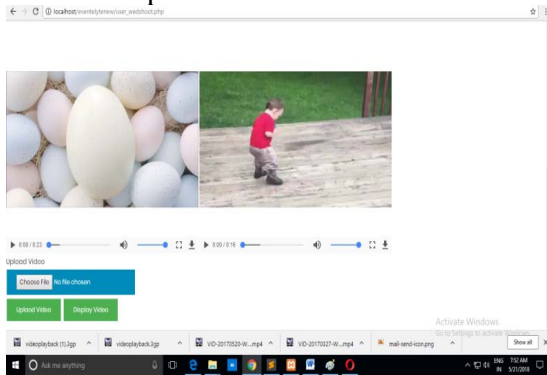

Fig.1 Pie chart for event expenses

## Wedshoot Module

Users can upload videos.

## Vendor

Vendor can advertise their services through this website. He can add details of his services, frequently asked questions, upload images, provide discount offer. A event calendar module will display all the events booked based on the date.

## Admin

Users and vendors contact with each other through admin. A user can book a vendor and send a request for the vendor. This request will be sent to the admin. The admin will verify the vendor details and approve the request only if the vendor is authorized. Once admin approve the request a message will be sent to vendor notifying a user has requested for his service.

## VI.CONCLUSION

EventElyt software is an online event organizing software in which user can communicate with vendor according to their choice and budget. It helps the users to choose their style of marriage, events easily and without much effort.

All the vendors, venues and event management services will be available on this website, with just one click you can book the services. This software provides a platform for brides and grooms to obtain information about bridal products and services, as well as vendors registered with EventElyt.

Users belonging to different tradition can get their event related vendors, venues, event services, so this system will fulfill their needs. This provides time efficiency, less manual work, less pressure for family, good service and schedule events in shortest possible time.
