ABSTRACT
The project is about filling an online complaint against any crime in case of victim or witnessed by the user. The aim of this system is to provide a complete access to the user so that he can track the complaint. The system reduces the manual efforts provided whenever a victim goes for registering his complaint. The system provides the best possible accessibility for the system so that a user can should not have an interrupt in accessibility of the system.
Keywords: Crime, complaint

I. INTRODUCTION

The crime control management system should be applied to police stations all across the country and specifically looks into the subject crime prevention, crime detection, crime conviction of criminals depending on a highly responsive e backbone of information management. The efficiency of the police and the effectiveness with which it tackles crime depend on what quality of information it can derive from its existing records and how fast it can have access to it.

II. LITERATURE:

2.1 Existing System:

The existing system defines current status of the system. The merits and demerits of the current system. The system may not provide the facility of registering the user. He or she just need to report in the police station. The complaint can be field against any criminal activity. The system lets you to get the best result as per rules and regulations.

DRAWBACKS OF EXISTING SYSTEM:
- More man power.
- Time consuming.
- Consumes large volume of paper work.
- No direct role for the higher officials.

To avoid all these limitations and make the working more accurately the system needs to be computerized

2.2 Proposed System with objectives:
2.2.1 USER:

The system provides a registration for a new user to let access the services by the web site.

1. ADD COMPLAINT: The system provides the registration of the complaint regarding any criminal activity.

2. ADD CRIME REPORT: The user is allowed to make a crime report against any live criminal activity which he wants to get address by the site

3. ADD MISSING PERSON: The system should also maintain a record of missing persons and the valid information regarding the missing person.

4. VIEW MISSING PERSON: The system shall maintain a record and status of the missing person.

5. VIEW WANTED PERSON: The system should keep a track record of the most wanted person and the criminal activities he had been performed.

6. EDIT COMPLAINT: The system shall allow user to update the complaint to resolve conflict in the current configuration.

7. EDIT ACCOUNT: This module helps the user to edit user account in case if change of address or phone no etc.

8. ADD FEEDBACK: This module helps the user to make a feedback so that if there is any changes should be made in the system it should be marked by the admin.

9. <u>MAIL</u>: The user should have a mail functionality through which he can forward any set of documents to the admin.

III.   SYSTEM STUDY
3.1 SYSTEM DESIGN:

The system implements the online registration of a complaint which will reduce the manual work.

The system makes the user to register and lets the user to know about the latest criminal activity and in which area going on.

The system provides registering of a missing complaint and track the status regarding the complaint.

The system basically divided into 2 modules i.e User Module, Administrator Module.

➢ **USER:**

- This module provides the user to register and lets him to access the services provided by the system.

- The services provided by this module are registering a complaint, filling a crime report, reporting of a missing person, viewing all most wanted criminal details and he can view the number of complaints he filled as an history

- The user files a complaint of any crime.

- The user can delete the registered complaint but for that he need to take the granting of the administrator and vice-versa

- The user can make a missing complaint.

- The system gives an option to make an E-MAIL.

- The framework gives you consistent updates with respect to any wrong doing or criminal.

- The system also lets user to make the edit in the complaint.

- The client can make a criticism with respect to the system, or dissension against any of the police miss behaving, or any officer abusing his power.
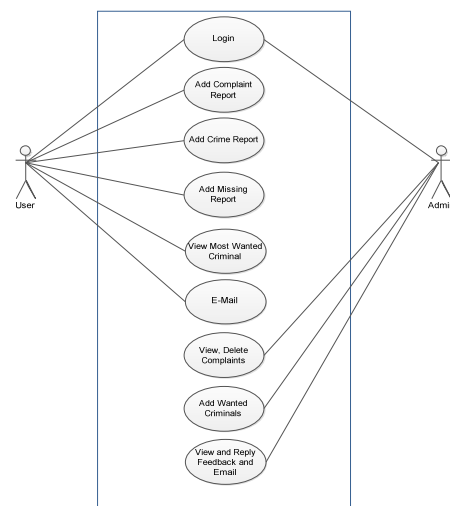

- The user can attach the photos, videos or any kind of documents for proof while making complaint.

➢ **ADMINISTRATOR:**

- The Admin makes every update in the system from this module.

- The admin has the rights to delete the users account

- He can likewise roll out the improvements in the visitors module according to the most recent news cover.

- He can update the news and criminal record as per the updated record.

- He can view and reply the user complaint and vice-versa.

- He can also view and reply the users feedback.

The framework gives the scrambled passwords which may assist the client with securing the record from any sort of assault.

While making the registration the system intakes the password and encrypts it before storing in the database and then it stores in the database in the encrypted format.

IV. CONCLUSION :

Crime File Management System is about filling an online complaint against any crime in case of victim or witnessed by the user. The System provides easiest and fastest way to register a complaint and a crime or registering for a missing complaint. The system helps the user to check the status of the complaint which makes the user to use it effectively and efficiently.
